## RKC WAALWIJK

**28 May 2019 - the day on which RKC Waalwijk secured a comeback in the Dutch Eredivisie after an unbelievably exciting match against Go Ahead Eagles (result: 4-5).**

A great moment for the club and a first for Stanno: the debut in the Eredivisie!

For the new season, we designed new away and home kits together with the club. Warmly received by the fans, and now fully in use in the fight for enforcement at the highest level.

## FOAM MATERIAL

 <b>HYPER FOAM</b>	 <b>AQUA FOAM</b>	 <b>SUPER SOFT PROFI FOAM</b>	 <b>SOFT FOAM</b>
<p>Hyper Foam provides optimum grip in both dry and wet weather conditions. The ultra-soft foam has unique properties. In rainy conditions, the moisture is absorbed and retained by the foam, which greatly improves the grip. In dry conditions, the gloves can be moistened less often thanks to the absorbing capacity of Hyper Foam. Hyper Foam increases ball control through excellent impact reduction and offers optimum wearing comfort.</p>	<p>Aqua Foam offers optimal grip in wet conditions. The soft and more open foam structure takes up water, which – in comparison to other types of foam – provides a 25% better grip. Additionally the Aqua Foam gloves contain an extra shock-absorbing function to reduce the impact of hard shots. The changing needs of professional keepers require that the characteristics and quality of the foam continually develop.</p>	<p>Super Soft Profi Foam has excellent properties for grip in both dry and wet conditions, and it also offers excellent cushioning. The use of the latest materials ensures durability and optimal comfort.</p>	<p>Soft Foam provides a reliable grip and excellent cushioning. Soft Foam ensures maximum ball control and optimal comfort.</p>

## FOAM PROPERTIES

	<p><b>GRIP DURING DRY WEATHER CONDITIONS</b></p> <p>The adhesive properties of the foam are decisive for an optimal grip and the best performance. The weather is a big influence on the properties and performances of the foam material. Playing during dry weather requires specific foam components for optimal results.</p>
	<p><b>GRIP DURING WET WEATHER CONDITIONS</b></p> <p>Moisture, rain and wet conditions affect the grip and require additional components for a better grip. A softer and more open foam structure absorbs the water and is very suitable for wet weather conditions.</p>
	<p><b>CUSHIONING</b></p> <p>As well as grip, cushioning is an important factor in determining the most suitable goalkeeper gloves. The softer and thicker the foam, the better the impact of the ball can be absorbed. Also the thickness of the basic material of the gloves determines the amount of cushioning.</p>
	<p><b>ABRASION RESISTANCE</b></p> <p>Foam is a very soft material that needs special treatment. Regular ball contact leads to wear and tear of the foam. The degree of wear is determined by the surface structure and the density of the foam material. A more coarse and closed foam structure will lead to less wear.</p>

# GOALKEEPERS GLOVES

One of the main features of goalkeeper gloves is the way in which the gloves are stitched. This determines the ball control, grip and comfort.

## ROLLFINGER-MODEL

With the **roll finger system**, the finger is completely surrounded by foam, without stitching. The magnification of the grip surface that is created in this way, allows for optimum grip on the ball.

The magnification of the grip surface that is created in this way, allows for optimum grip on the ball.

# TECHNICAL INFORMATION

## MATERIAL

ClimaTec material is a comfortable, warm, lightweight material, fast drying and easy to maintain. The advanced microfibres transport the body fluids and keep you comfortable in many weather conditions.

WovenTec increases the wearing comfort and provides a soft feel. The material has a luxurious appearance. WovenTec products are not only functional during sports activities but also perfectly suitable for presentations.

PolyTec has a thermal effect and is easy to wash, which simplifies maintenance. It protects against cold wind and is a great combination of a functional and durable product.

Coated articles with taped seams, including rain gear and all-weather jackets, are finished with a special coating. Depending on the type of coating the articles are waterproof, windproof or water-repellent.

Extra elastic polyester gives our socks an even better fit. It also provides extra stretchability, making it easier to place the shin guard underneath.

Polypropylene is a thermal fibre with the lowest specific weight available. It is moisture-resistant and moisture-transportable. Polypropylene is 100% real colour, non-shrinking and recyclable. It gives perfect comfort to your feet and avoids skin irritation. Stanno specifically uses polypropylene for high quality sports socks.

ComfortTec material is a very comfortable material. It keeps the body warm with its soft brushed inner.

MotionTec material is comfortable, lightweight and tight fitting because of the yarn used and the knitting technique. The fabric has a high stretchability because of the high level of elasticity in the product. It's functional and durable, perfectly suited for indoor sports.

TTS is a highly functional and durable material. Extremely suitable for strenuous exercise. The material is easy to wash which simplifies maintenance.

We will not accept any responsibility for printing errors in the catalogue! All Stanno products are suitable for printing, front or back. Garment care: Stanno products are made to the highest standards and are subject to strict quality control procedures. Garments however can discolour due to substances such as mud and grass, liniment or oil, and of course perspiration, all of which may not be fully removable by washing. The extent of discolouration can be greatly reduced by following a few simple procedures. Soaking and/or washing of the garment in water and detergent as soon as possible after use can reduce discolouration, using at least the same volume of water as the garment being treated. Always follow detergent manufacturers instructions, especially those

intended to tackle heavy stains and avoid products containing bleach. Stanno International cannot accept any liability for discolouration or damage to garments resulting from staining caused by elements foreign to the materials used in manufacture.
